Princesmc Liquidity A-Z Guide

General information

- We trade from 14:30pm- 4pm London time
- Pairs we trade SPX can also use US30
- Do not trade news on RED FOLDER DAYS within the start of New York session or during our trading time
- Strategy is very simple so I will not overcomplicate

Strategy Checklist

1) We firstly need to mark out our trading times of 2:30pm - 4pm London time as this will be our trading session
2) Mark out the highs and lows that occurred before 2:30pm
3) At 2:30pm we will look for a break of structure on a high or low on the 15 minute time frame (I tend to aim for a break of structure with the body on the 15 minute time frame)
4) Once we have had a break of structure of a high on the 15 minute time frame we will go down to the 1 minute time frame looking for a break of structure on a low with the body to look for sells
5) If we get a break of structure of a low on the 15 minute time frame then we will go down to the 1 minute time frame and look for a break of structure with the body on a high
6) Once the high or low has been broken then we enter off the second candle which is going towards our bias for us to make an entry
7) I would recommend that you put your take profit at a minimum of 1:1RR and to put your stop loss at the nearest high/nearest low
8) This is a very simple but effective strategy please make sure to follow the steps in order to receive the best results
